

RaportAI Documentation Summary

Concise reference for individual usage, corporate onboarding, and external API integration.

Overview

- RaportAI keeps user, corporate, admin, and accounting access paths isolated.
- Corporate teams operate from organization.html and api-keys.html.
- HBYS and PACS integrations use an async job model.

Individual Workflow

- Use login.html for individual sign-in.
- Create reports from dashboard and reporting-ai.html.
- Manage templates, reports, and exports from the same account.

Corporate Workflow

- Use kurumsal-login.html for institutional access.
- Org admins manage members and the corporate API key.
- Only authorized institutional managers should hold the API key.

External API

- Production base URL: <https://raportai.com/api/external/v1>
- Authentication: Authorization Bearer rapi_xxx
- Core endpoints: GET /templates, POST /report, GET /report/{jobId}
- Protect callback processing with HMAC verification and timestamp window checks.
